

WE MAKE THE INVISIBLE VISIBLE.

- ✓ Complete traceability.
- ✓ Immediate evidence.
- ✓ Absolute control.

THE LOGS ARE THERE. THE ANSWERS ARE NOT.

Critical activity exists, but it is scattered across isolated tools, raw events and context-free alerts. When an incident occurs, the truth takes far too long to surface.

Events without context

OPERATIONAL NOISE

The records exist, but they do not tell the full story. Without correlation, you only have isolated events — not a clear sequence of what actually happened.

Critical activity flying under the radar

REAL RISK

Changes, accesses and critical sessions can go completely unnoticed until the damage is already done.

Slow investigations

INCIDENT RESPONSE

Every incident means manually cross-referencing sources to reconstruct an incomplete picture: **wasted time, uncertainty and weak evidence.**

Mitra Auditor turns scattered activity into **immediate, searchable and actionable evidence.**

TOTAL CONTROL OVER CRITICAL ACTIVITY.

Mitra Auditor connects activity across identity, users, data, systems, collaborative cloud and corporate AI, turning it into searchable, investigable traceability.

IDENTITY

Audits changes to users, groups, GPOs, permissions and privileges — capturing actor, action, origin and timestamp with forensic precision.

USERS & SESSIONS

Reconstructs logins, authentications and lateral movement between machines to detect anomalous behaviour. Goes further: traces user activity on their workstation without installing anything on it.

FILES & DATA

Tracks access, creation, modification and deletion of files — showing which resource was touched, by whom, from where and when.

SERVERS

Centralises activity from servers, critical services and relevant operational signals to understand changes, errors and technical incidents.

DATABASES

Monitors privileged access, bulk queries, sensitive operations and changes to business-critical databases.

MICROSOFT 365 + COPILOT

Delivers full traceability across Microsoft 365 and Copilot: identity, documents, data accessed, conversations and new AI-generated exposure.

NOT REPORTING. FORENSIC RECONSTRUCTION.

Every module feeds a single verifiable story: actor, action, resource, origin and impact.

On-Premise

Agentless
